

🎯 About Maxa Solutions

Maxa Solutions is a trading name of Maxa Technologies Limited and provides uniquely tailored solutions for specific market sectors.

Maxa Technologies (Maxatec) has more than 35 years' experience in supplying IT to various market sectors, including Point of Sale, Automatic Identification and Mobility across Europe, The Middle East and Africa. Selection of hardware partners is critical and is based upon technology, quality and reliability, enabling Maxa Technologies to provide best of breed solutions to customers.

Maxa Solutions provides services, solutions and support to a number of clients. Our solutions are essentially unique to our customers and we work closely with each customer to ensure that the solution provides maximum benefits. After sales service and support are tailored to each customer's needs and include helpdesk and on-site maintenance within a customer's required timescales, to ensure that day-to-day business is not interrupted.

Solutions

Helping Charity Shops Touch The Future

CHARiot from Maxa Solutions is a fully proven retail EPOS solution developed specifically for charity shops.

The solution is extremely sophisticated, yet takes into account some of the specific simplified needs of a charity shop environment. The user-friendly graphical interface to the software is simple for volunteers to understand, and interaction with the system utilises high resolution touchscreen display technology.

The software has been developed by Maxa Solutions from a comprehensive retail EPOS

package. Our experience within the charity retail arena has been used in conjunction with our specialist software partner, to deliver a system with specific functionality

for this growing sector. During the development of this software, we have considered key factors such as volunteer staff, donated goods, donations and HMRC tax

legislation, amongst many others and, at the same time, we have ensured that all the standard EPOS and management functionality remains within the system.

CHARiot software has fully integrated and powerful head office facilities, ensuring that management information and reporting requirements are readily available, hence improving retail operations through the

implementation of the EPOS system.

The configurable structure of CHARiot enables the solution to be tailored to the requirements of the charity retail operation, and also enables greater scope for enhancements and upgrades as the processes within the organisation develop.

The CHARiot EPOS solution is a natural choice for any charity retail organisation wishing to gain efficiencies, improve information flow and increase productivity.
